桌面版有2種...

上課以這個版本為主
此投影片僅收錄此版本畫面

	Mendeley Reference Manager (新版)	Mendeley Desktop (舊版)
優點	畫面風格簡潔 新增：Notebook筆記功能	進階功能較完整
缺點	目前(2020年04月)進階功能少	與EndNote相衝突，無法同時使用
書目與全文PDF	全部雲端儲存 (PDF需單篇手動下載)	雲端儲存，亦同步下載至電腦端
插入Word的方式	Mendeley Cite (無須安裝軟體亦可插入Word)	1. MS Word Plugin(需安裝軟體) 2. Mendeley Cite

第1步：

註冊 **Mendeley** 線上版

<https://www.mendeley.com/>

It's time to change the way we do research.

Mendeley is a free **reference manager** and **academic social network** that can help you organize your research, collaborate with others online, and discover the latest research.

- Automatically **generate bibliographies**
- **Collaborate easily** with other researchers online
- Easily **import papers** from other research software
- **Find relevant papers** based on what you're reading
- Access your papers from **anywhere online**
- Read papers on the go, with our new **iPhone app**
- [View more features...](#)

網頁版簡介

Mendeley 網頁版畫面

The screenshot shows the Mendeley web interface. The 'Library' tab is highlighted with a red circle. The navigation bar includes 'Feed', 'Library', 'Suggest', 'Groups', 'Datasets', 'Careers', and 'Funding'. The left sidebar shows 'FILTER BY' options: 'All posts', 'Citation updates', 'Recently published articles', 'Article suggestions', 'GROUPS', '(Invite-Only) Information Service', '(Open) Library Information Serv...', 'Library Information Service', and '+ Join a group'. The main content area has a post creation box with 'Attach documents' and 'Attach images' buttons, a text input field, and a 'Post' button. Below is a section for 'Discover researchers on Mendeley' with a search bar. At the bottom, there is a section for 'Articles suggested for you' with a list of articles.

- Feed : 最新消息
- Suggest : 推薦文章
- Groups : 群組
- Dataset : 開放資料集
- Careers : 找工作
- Funding : 找資金

Mendeley Library 網頁版畫面

The screenshot displays the Mendeley Library web interface. At the top, there are navigation tabs: Feed, Library, Suggest, Stats, Groups, Data, Careers, and a search bar labeled 'Library search'. The user's name 'Liling' is visible in the top right corner.

The main content area is divided into two sections: a list of articles on the left and a detailed view of the selected article on the right.

Modality-Dependent Cross-Media Retrieval

YUNCHAO WEI, YAO ZHAO, ZHENFENG ZHU, SHIKUI WEI, and YANHUI XIAO,
Beijing Jiaotong University
JIASHI FENG and SHUICHENG YAN, National University of Singapore

In this article, we investigate the cross-media retrieval between images and text, that is, using image to search text (I2T) and using text to search images (T2I). Existing cross-media retrieval methods usually learn one couple of projections, by which the original features of images and text can be projected into a common latent space to measure the content similarity. However, using the same projections for the two different retrieval tasks (I2T and T2I) may lead to a tradeoff between their respective performances, rather than their best performances. Different from previous works, we propose a modality-dependent cross-media retrieval (MDCR) model, where two couples of projections are learned for different cross-media retrieval tasks instead of one couple of projections. Specifically, by jointly optimizing the correlation between images and text and the linear regression from one modal space (image or text) to the semantic space, two couples of mappings are learned to project images and text from their original feature spaces into two common latent subspaces (one for I2T and the other for T2I). Extensive experiments show the superiority of the proposed MDCR compared with other methods. In particular, based on the 4,096-dimensional convolutional neural network (CNN) visual feature and 100-dimensional Latent Dirichlet Allocation (LDA) textual feature, the mAP of the proposed method achieves the mAP score of 41.5%, which is a new state-of-the-art performance on the Wikipedia dataset.

Categories and Subject Descriptors: H.3.3 [Information Search and Retrieval]: Retrieval models
General Terms: Design, Algorithms, Performance
Additional Key Words and Phrases: Cross-media retrieval, subspace learning, canonical correlation analysis

1. INTRODUCTION

With the rapid development of information technology, multimodal data (e.g., image, text, video, or audio) have become widely available on the Internet. For example, an image often co-occurs with text on a web page to describe the same object or event.

From Social to Sale: The Effects of Firm-Generated Content in Social Media on Customer Behavior

Given the unprecedented reach of social media, firms are increasingly relying on it as a channel for marketing communication. The objective of this study is to examine the effect of firm-generated content (FGC) in social media on three key customer metrics: spending, cross-buying, and customer profitability. The authors further investigate the synergistic effects of FGC with television advertising and e-mail communication. To accomplish their objectives, the authors assemble a novel data set comprising customers' social media participation data, transaction data, and attitudinal data obtained through surveys. The results indicate that after the effect of television advertising and e-mail marketing, FGC has a positive and significant effect on customer behavior. FGC works synergistically with both television advertising and e-mail marketing. The effect of FGC is greater for more experienced, tech-savvy, and social media-prone customers. The effect of three characteristics of FGC: valence, receptivity, and customer similarity. If all three components of FGC have a positive impact, the effect of FGC reception is significant. Managerial insights regarding how to leverage social media for better results are provided.

Keywords: social media analytics, firm-generated content, digital marketing, propensity score matching/difference-in-differences

PDF功能(桌面版)

The screenshot displays the Mendeley Desktop interface. The main window shows a PDF document titled "Greedy algorithms in coding theory" by Gerard Cohen, Simon Litsyn, and Gilles Zémor. The document content includes an abstract, an introduction, and a section on separating systems. Annotations are present: a yellow highlight rectangle covers the first paragraph of the introduction; a red highlight rectangle covers a paragraph in the "Separating systems" section; a red note bubble is attached to the bottom of this paragraph. The right sidebar shows document details, including the type "Conference Proceedings", the title "Greedy algorithms in coding theory", and the authors' names. The top menu bar includes File, Edit, View, Go, Tools, and Help. The toolbar contains icons for Pan, Select, Highlight, Note, Rotate, Zoom, Fullscreen, Share, and Sync. The window title bar reads "Mendeley Desktop".

ering codes, codes for conflict resolution, separating systems, source encoding with distortion, etc., are given a unified treatment.

1 Introduction

There is a wealth of problems that can be stated as follows: *find the minimum number of rows in a binary matrix with n columns such that in every submatrix with t columns there appears (as rows) a prescribed set of vectors.* We will assume n growing and t fixed. Let \hat{T} stand for the set of all possible binary t -tuples, and $T \subseteq \hat{T}$. Assume some partition of T into s nonvoid parts, namely, $T = T_1 \cup \dots \cup T_s$. Denote $T_0 = \hat{T} \setminus T$. Let T be closed under the symmetric group of permutations. If the T_i 's are stable under complementation, i.e. contain along with any vector its binary complement, we call such a partition *symmetric*.

Now the problem is to find the minimal number K of rows in an (n, t, T) array, i.e. a matrix having n columns, such that in every subset of t columns there appears at least one t -tuple from every subset T_i , $i = 1, \dots, s$.

Examples

- 1. Surjective arrays or t -independent families**
For applications in testing, hash functions, robustness of multiprocessor architectures, etc. see e.g. [1, 5, 11, 19]. Here $s = 2^t$, $T_0 = \emptyset$, and every T_i contains exactly one vector.

$s = \binom{t}{k}$. Every T_i consists of two complementary vectors, T_1 containing the two vectors $0^k 1^t$ and $1^k 0^t$, and the other T_i 's being all possible permutations of T_1 .

Most of the best results concerning K are achieved through random methods. In this paper we focus on more constructive techniques. To be precise, we need to introduce two levels of complexity for algorithms that yield (n, t, T) -arrays.

The following theorem gives us an important tool for constructing good coverings.

Theorem 1 *Let A be a $(0,1)$ matrix with N rows and M columns. Assume that each row contains at least v ones, and each column at most a ones. Then there exists an $N \times K$ submatrix C with*

$$K \leq N/a + (M/v) \ln a \leq (M/v)(1 + \ln a), \quad (1)$$

such that C does not contain an all-zero row.

The theorem is proved by presenting a greedy algorithm leading to a desired C .

2 (n, t, T) -arrays

Now we demonstrate how the theorem is employed to build (n, t, T) -arrays. Let A be the following incidence matrix formed by all the vectors of length t with number j by the vector v_j representing the representation of j . The number v_j is associated to every row a double number, the first part of it being a number from 1 to s , and the second part being a number from 1 to 2^t .

The screenshot shows a Mendeley group page. The group name is "Joint Immunology Journal Club of KAIST" with 81 papers and 59 members. The page is divided into several sections:

- Overview:** Includes a "Papers" tab (highlighted with a red box) and a "Members" section.
- Group activity:** Lists recent posts by members like Minhyeok Kim, Hi Eun Jung, and Chaemin Yuk. A "Papers" tab is also visible here (highlighted with a red box).
- About this group:** Shows the group is owned by Heung Kyu Lee, an Assistant Professor in Biological Sciences. It lists 60 members and tags for Biological Sciences and Medicine.
- Papers in this group:** A list of papers with a "Papers" tab (highlighted with a red box) and a "Members" tab. The list shows papers like "cells and innate lymphoid cells (ILC) 2, has not been documented..." and "Critical role of Trib1 in differentiation of tissue-resident M2-like macrophages".
- Top tags in this group:** A list of tags such as "microbiota", "salt and multiple sclerosis", "sal", "NaCl", "tGnase SGK1", "type II interferon", "multiple sclerosis", "Folder - Nutrición", "#Th17", "IL-37", "peroxisome", "Th17", and "17".

Annotations in orange callouts point to specific features:

- "小組討論" (Group Discussion) points to the "Group activity" section.
- "老師建立群組" (Teacher creates group) points to the "About this group" section.
- "用標籤標示文章以分類" (Use tags to mark articles for classification) points to the "Top tags in this group" section.
- "文章分享" (Article sharing) points to the "Papers" tab in the Overview section.

Peroxisome proliferator activated receptor gamma agonists suppress TNFalpha-induced ICAM-1 expression by endothelial cells in a manner potentially dependent on inhibition of reactive oxygen species.

Abstract

In this study, we investigated the anti-inflammatory effect of various peroxisome proliferator activated receptor gamma (PPARgamma) agonists (15-deoxy-Delta12,14-prostaglandin J(2), troglitazone, rosiglitazone, ciglitazone) on human aortic endothelial cells. Pretreatment with PPARgamma agonists abrogated tumor necrosis factor alpha (TNFalpha)-induced expression of intercellular adhesion molecule-1 (ICAM-1) and subsequent monocytic adhesion by endothelial cells. Because reactive oxygen species (ROS) have been reported to play important roles in pro-inflammatory signal transduction, the involvement of ROS was investigated as a potential mechanism of anti-inflammatory effect of PPARgamma ligands. Consistent with previous reports in other cell types, blockade of TNFalpha-induced ROS by treatment with N-acetylcysteine, diphenylene iodonium or NADPH oxidase 4 (NOX4) siRNA suppressed TNFalpha-induced ICAM-1 expression and subsequent monocytic adhesion, indicating that TNFalpha mediates pro-inflammatory signals via NOX4-dependent ROS generation in human endothelial cells.

Overview(網頁版)

The screenshot shows a social media group page for "(Invite-Only) Information Service". The page includes a navigation bar with options like Feed, Library, Suggest, Groups, Datasets, Careers, and Funding. The group profile section shows the name, category (Social Sciences), and an "Invite members" button. Below this are tabs for Overview, Members, Documents, and Settings. A central post area contains a text input field with "Attach documents" and "Attach images" options, and a "Post" button. Below the input field is a post from "You" dated May 16, 2017, with the text "hello". At the bottom of the post are "Like" and "Comment" buttons. On the left side, there is a "Group admins" section listing "Liling Ou" as the owner, with an "Explore members" link below it.

Documents(網頁版)

The screenshot shows the 'Library Information Service' group page on ResearchGate. The page is for a 'PRIVATE GROUP' and is categorized under 'Computer Science'. The 'Documents' tab is selected, showing a list of documents. The first document is titled 'Recombinant Lectin-Like Domain of Thrombomodulin Suppresses Vascular Inflammation by Reducing Leukocyte Recruitment via Interacting With Lewis Y on Endothelial Cells' by Lin W, Chang C, Shi C, Shi G, Wu H, published in 'Arteriosclerosis, Thrombosis, and Vascular Biology' in 2013. The document has 17 readers and a 'Download' button. Annotations in red boxes and speech bubbles highlight the 'Added December 31, 2015' date, the '17 Readers' count, and the 'Download' button.

Recombinant Lectin-Like Domain of Thrombomodulin Suppresses Vascular Inflammation by Reducing Leukocyte Recruitment via Interacting With Lewis Y on Endothelial Cells

Lin W, Chang C, Shi C, Shi G, Wu H

Arteriosclerosis, Thrombosis, and Vascular Biology, vol. 33, issue 10 (2013)

OBJECTIVE: The N-terminus (residues 1-101) of thrombomodulin (TM) is known to have an anti-inflammatory function. We previously showed that recombinant TM(1-101) interacts with a carbohydrate molecule, Lewis Y (Le(y)), which is found to be expressed on endothelial cells.

The screenshot shows the Mendeley Groups interface for a private group named 'Library Information Service'. The group's category is 'Computer Science'. A red circle highlights the 'Edit' link next to the category name. A red callout box with the text '修改細節與分類' (Modify details and classification) points to this 'Edit' link. The page includes navigation tabs for 'Overview', 'Members', and 'Documents'. On the left, there are settings for 'Email notifications' with checkboxes for 'New posts in this group' and 'New comments in this group', and buttons for 'Save changes' and 'Cancel'. On the right, there is a section for deleting group data and a 'Delete this group' link.

The screenshot shows the Mendeley Desktop application window. The interface includes a menu bar (File, Edit, View, Tools, Help), a toolbar with icons for Add, Folders, Related, Sync, and Help, and a main content area. On the left, there is a sidebar with 'Mendeley' and 'My Library' sections. The 'My Library' section contains various folders like 'All Documents', 'Recently Added', 'Recently Read', 'Favorites', 'Needs Review', 'My Publications', 'Unsorted', '2017館刊', 'Cancer', and 'Open Access'. Below this is the 'Groups' section, which is highlighted with a red box and contains 'Library Information Service', '(Invite-Only) Information Service', and '(Open) Library Information Ser...'. The main content area displays a list of library items with columns for Authors and Title. The 'Library Information Service' group is selected, and an 'Edit Settings' button is highlighted with a red box. A red callout bubble points to the 'Edit Settings' button with the text '可修改是否同步全文的設定'. Another red callout bubble points to the 'Library Information Service' group with the text '可查看書目'. A third red callout bubble points to a document icon in the list with the text '全文'. A fourth red callout bubble points to the 'Groups' section with the text '不同權限的群組'.
