ABSTRACT

The ongoing pandemic of coronavirus disease 2019 (COVID-19) caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) has made a serious public health threat worldwide with millions of people at risk in a growing number of countries. Though there are no clinically approved antiviral drugs and vaccines for COVID-19, attempts are ongoing for clinical trials of several known antiviral drugs, their combination, as well as development of vaccines in patients with confirmed COVID-19. This... Read more

Modality-Dependent Cross-Media Retrieval

YUNCHAO WEI, YAO ZHAO, ZHENFENG ZHU, SHIKUI WEI, and YANHUI XIAO,
Beijing Jiaotong University
JIASHI FENG and SHUICHENG YAN, National University of Singapore

In this article, we investigate the cross-media retrieval between images and text, that is, using image to search text (I2T) and using text to search images (T2I). Existing cross-media retrieval methods usually learn one couple of projections, by which the original features of images and text can be projected into a common latent space to measure the content similarity. However, using the same projections for the two different retrieval tasks (I2T and T2I) may lead to a tradeoff between their respective performances, rather than their best performances. Different from previous works, we propose a modality-dependent cross-media retrieval (MDCR) model, where two couples of projections are learned for different cross-media retrieval tasks instead of one couple of projections. Specifically, by jointly optimizing the correlation between images and text and the linear regression from one modal space (image or text) to the semantic space, two couples of mappings are learned to project images and text from their original feature spaces into two common latent subspaces (one for I2T and the other for T2I). Extensive experiments show the superiority of the proposed MDCR compared with other methods. In particular, based on the 4,096-dimensional convolutional neural network (CNN) visual feature and 100-dimensional Latent Dirichlet Allocation (LDA) textual feature, the mAP of the proposed method achieves the mAP score of 41.5%, which is a new state-of-the-art performance on the Wikipedia dataset.

Categories and Subject Descriptors: H.3.3 [Information Search and Retrieval]: Retrieval models

General Terms: Design, Algorithms, Performance

Additional Key Words and Phrases: Cross-media retrieval, subspace learning, canonical correlation analysis

1. INTRODUCTION

With the rapid development of information technology, multimodal data (e.g., image, text, video, or audio) have become widely available on the Internet. For example, an image often co-occurs with text on a web page to describe the same object or event.

A hybrid public key infrastructure solution (HPKI) for HIPAA privacy/security regulations

Hu J, Chen H, Hou T
Computer Standards & Interfaces, (2010), 274-280, 32(5-6)

ABSTRACT

The Health Insurance Portability and Accountability Act (HIPAA) has set privacy and security regulations for the US healthcare industry. HIPAA has also established principles for security standards that global e-health industry tends to follow. In this paper, a hybrid public key infrastructure solution (HPKI) is proposed to comply with the HIPAA regulations. The main contribution is the new e-health security architecture that is contract oriented instead of session oriented which exists in most literatures. The... [Read more](#)

From Social to Sale: The Effects of Firm-Generated Content in Social Media on Customer Behavior

Given the unprecedented reach of social media, firms are increasingly relying on it as a channel for marketing communication. The objective of this study is to examine the effect of firm-generated content (FGC) in social media on three key customer metrics: spending, cross-buying, and customer profitability. The authors further investigate the synergistic effects of FGC with television advertising and e-mail marketing. The authors assemble a novel data set comprising customers' social media usage, purchase history, and attitudinal data obtained through surveys. The results indicate that FGC has a positive and significant effect on customer spending, cross-buying, and profitability. Specifically, FGC works synergistically with both television advertising and e-mail marketing, and the effect of FGC is greater for more experienced, tech-savvy, and social media users. Moreover, all three components of FGC: valence, receptivity, and originality, have a positive impact, the effect of which is moderated by managerial insights regarding how to leverage social media for marketing.

Keywords: social media analytics, firm-generated content, digital marketing, customer relationship management, propensity score matching/difference-in-differences

The screenshot shows a library interface with a sidebar on the left and a main content area. The sidebar has a 'Library' header and a 'Notebook' tab. Below the header, there is a '+Add new' button and a list of navigation items: 'All References', 'Recently Added', 'Recently Read', 'Favorites', 'My Publications', 'Duplicates' (circled in red), and 'Trash'. Under 'COLLECTIONS', there are '2017 雜誌', '運動生理學', 'Cancer', 'OA老師們的文章', and 'Open Access'. Under 'GROUPS', there is 'Library Information Service' and 'New Group'. The main content area is titled 'Duplicates' and shows '39 sets of duplicates with the same DOI'. It contains five sections, each with a header 'This set contains 2 duplicates of the same reference' and a table of two entries. The first entry in each set is dated 'Added 2016/2/15' and the second is dated 'Added 2021/10/14'. The trash icon for the second entry in the first set is circled in red.

Clinical characteristics and intrauterine vertical transmission potential of COVID-19 infection in nine pregnant women: a retrospective review of medical records

Huijun Chen*, Juanjuan Guo*, Chen Wang*, Fan Luo, Xuechen Yu, Wei Zhang, Jiafu Li, Dongchi Zhao, Dan Xu, Qing Gong, Jing Liao, Huxia Yang, Wei Hou, Yuanzhen Zhang

Summary
Background Previous studies on the pneumonia outbreak caused by the 2019 novel coronavirus disease (COVID-19) were based on information from the general population. Limited data are available for pregnant women with COVID-19 pneumonia. This study aimed to evaluate the clinical characteristics of COVID-19 in pregnancy and the intrauterine vertical transmission potential of COVID-19 infection.

Methods Clinical records, laboratory results, and chest CT scans were retrospectively reviewed for nine pregnant women with laboratory-confirmed COVID-19 pneumonia (ie, with maternal throat swab samples that were positive for severe acute respiratory syndrome coronavirus 2 [SARS-CoV-2]) who were admitted to Zhongnan Hospital of Wuhan University, Wuhan, China, from Jan 20 to Jan 31, 2020. Evidence of intrauterine vertical transmission was assessed by testing for the presence of SARS-CoV-2 in amniotic fluid, cord blood, and neonatal throat swab samples. Breastmilk samples were also collected and tested from patients after the first lactation.

Findings All nine patients had a caesarean section in their third trimester. Seven patients presented with a fever. Other symptoms including cough (in four of nine patients), myalgia (in three), sore throat (in two), and diarrhoea (in one) were also observed. Amniotic fluid was monitored in two cases. Five of nine patients had lymphopenia ($<1.0 \times 10^9$ cells per L) concentrations. None of the patients developed severe complications. No neonatal asphyxia was observed. Apgar scores of 8–9 and a 5-min Apgar score of 9–10. Amniotic fluid, cord blood, and neonatal throat swab samples from six patients were tested for SARS-CoV-2, and all samples were negative for the virus.

Interpretation The clinical characteristics of COVID-19 pneumonia in pregnant women were similar to those reported for non-pregnant adult patients who developed COVID-19 pneumonia. Findings from this small group of
